

# 悟时机器人应用层ROS接口

版本	编辑时间	编辑人	编辑内容
v0.0.1-beta	2025-1-2	HuiMin	初稿

## 简介

略

## 开发与运行环境

1. Ubuntu 24.04 AMD64 ROS 2 **Jazzy**
2. Ubuntu 22.04 AMD64 ROS 2 **Humble**
3. Ubuntu 20.04 AMD64 ROS 2 **Foxy**
4. Ubuntu 20.04 **ARM64** ROS 2 **Foxy**

## 部署运行

获取对应版本的 `ros-xxx-woosh-robot-agent-xxx-xxx.run` 安装包.

```
chmod +x ros-xxx-woosh-robot-agent-xxx-xxx.run
./ros-xxx-woosh-robot-agent-xxx-xxx.run
```

运行 agent:

```
ros2 run woosh_robot_agent agent --ros-args -r __ns:=/woosh_robot -p
ip:="172.20.8.74"
```

命名空间 `ns` 建议设定为 `/woosh_robot`, 文档及提供的 Demo 均是以此为准.

`ip` 为机器人底盘的 IP, 默认为 `169.254.128.2`.

## 接口说明

目前提供三种形式的接口, 分别是 `service`、`topic` 和 `action`

## 机器人信息相关

### 获取机器人所有信息

- 接口类型: `service`
- 服务名称: `robot/RobotInfo`
- 消息类型: `woosh_robot_msgs/srv/RobotInfo`

ros cli command:

```
ros2 service call /woosh_robot/robot/RobotInfo woosh_robot_msgs/srv/RobotInfo
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/RobotInfo --all-comments`

## 获取常规信息

- 接口类型: `service`
- 服务名称: `robot/General`
- 消息类型: `woosh_robot_msgs/srv/General`

ros cli command:

```
ros2 service call /woosh_robot/robot/General woosh_robot_msgs/srv/General
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/General --all-comments`

```
# 机器人常规信息

# 机器人类型
woosh_robot_msgs/Type type
# 未定义的
int32 K_TYPE_UNDEFINED=0
# 通用底盘
int32 K_BASE_ROBOT_200=1
# 栈板平台举升
int32 K_PALLET_LIFT_ROBOT_500=11
# 移动料车举升
int32 K_SHELF_LIFT_ROBOT_500=21
# 牵引机器人
int32 K_TRACTOR_ROBOT_500=31
# 辊筒机器人
int32 K_ROLLER_ROBOT_500=41
# 复合机器人统称
int32 K_COMPLEX_ROBOT=50
# 复合机械臂
int32 K_ARM_ROBOT_14=61

int32 value
# 机器人尺寸+自重+载重
woosh_robot_msgs/GeneralModelData model_data
# 长
uint32 length
# 宽
uint32 width
# 高
uint32 height
# 自重
uint32 weight
# 载重
uint32 load
# 模型名称
string urdf_name
# 显示名称
string display_model
# 机器人编号
uint32 serial_number
# 机器人服务号
string service_id
```

```
# 驱动方式，0：两轮差速，1：四舵轮
uint32 driver_method
woosh_robot_msgs/GeneralVersion version
# 机器人系统版本号
string system
# 应用模块版本号
string rc
```

## 获取配置信息

- 接口类型: `service` | `topic`
- 服务名称: `robot/Setting`
- 话题名称: `robot/Setting`
- 消息类型: `woosh_robot_msgs/msg/Setting`

### ros cli command:

```
ros2 service call /woosh_robot/robot/Setting woosh_robot_msgs/srv/Setting
ros2 topic echo /woosh_robot/robot/Setting
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/Setting --all-comments`

```
# 机器人基本设置信息

# 机器人标识
woosh_robot_msgs/Identity identity
# 机器人昵称
string name
# 连接服务器信息
woosh_robot_msgs/Server server
# 服务器IP
string ip
# 服务器端口
uint32 port
# 电量配置信息
woosh_robot_msgs/Power power
# 警告电量值
uint32 alarm
# 低电量值
uint32 low
# 空闲电量值
uint32 idle
# 满电量值
uint32 full
# 声音设置信息
woosh_robot_msgs/Sound sound
# 静音
bool mute
# 音量
uint32 volume
woosh_robot_msgs/SettingAllow allow
# 是否开启低电量时自主回充
bool auto_charge
```

```
# 是否开启空闲时自主泊车
bool auto_park
# 是否开启货物检测
bool goods_check
# 是否开启机械检测
bool mechanism_check
```

## 获取机器人状态

- 接口类型: `service` | `topic`
- 服务名称: `robot/RobotState`
- 话题名称: `robot/RobotState`
- 消息类型: `woosh_robot_msgs/msg/RobotState`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/RobotState woosh_robot_msgs/srv/RobotState
ros2 topic echo /woosh_robot/robot/RobotState
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/RobotState --all-comments`

```
# 机器人状态
woosh_robot_msgs/State state
# 未定义的
int32 K_STATE_UNDEFINED=0
# 未初始化
int32 K_UNINIT=1
# 空闲
int32 K_IDLE=2
# 泊车中
int32 K_PARKING=3
# 任务中
int32 K_TASK=4
# 警告
int32 K_WARNING=5
# 异常
int32 K_FAULT=6
# 跟随中
int32 K_FOLLOWING=7
# 充电中
int32 K_CHARGING=8
# 构图中
int32 K_MAPPING=9

int32 value
```

## 获取模式信息

- 接口类型: `service` | `topic`
- 服务名称: `robot/Mode`
- 话题名称: `robot/Mode`

- 消息类型: `woosh_robot_msgs/msg/Mode`

#### ros cli command:

```
ros2 service call /woosh_robot/robot/Mode woosh_robot_msgs/srv/Mode
ros2 topic echo /woosh_robot/robot/Mode
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/Mode --all-comments`

```
# 机器人控制模式信息

# 控制模式
woosh_robot_msgs/ControlMode ctrl
  # 未定义的
  int32 K_CONTROL_MODE_UNDEFINED=0
  # 自动
  int32 K_AUTO=1
  # 手动
  int32 K_MANUAL=2
  # 维护
  int32 K_MAINTAIN=3
  int32 value

# 工作模式，控制模式为自动时有效
woosh_robot_msgs/WorkMode work
  # 未定义的
  int32 K_WORK_MODE_UNDEFINED=0
  # 部署模式
  int32 K_DEPLOY_MODE=1
  # 任务模式
  int32 K_TASK_MODE=2
  # 调度模式
  int32 K_SCHEDULE_MODE=3

  int32 value
```

## 获取位姿速度

- 接口类型: `service` | `topic`
- 服务名称: `robot/PoseSpeed`
- 话题名称: `robot/PoseSpeed`
- 消息类型: `woosh_robot_msgs/msg/PoseSpeed`

#### ros cli command:

```
ros2 service call /woosh_robot/robot/PoseSpeed woosh_robot_msgs/srv/PoseSpeed
ros2 topic echo /woosh_robot/robot/PoseSpeed
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/PoseSpeed --all-comments`

```
# 机器人位姿速度

# 速度
woosh_common_msgs/Twist twist
```

```

# 线速度
float32 linear
# 角速度
float32 angular
# 位姿
woosh_common_msgs/Pose2D pose
# x
float32 x
# y
float32 y
# 朝向
float32 theta
# 地图ID
uint32 map_id
# 累计里程，单位m
uint32 mileage

```

## 获取电池信息

- 接口类型: `service` | `topic`
- 服务名称: `robot/Battery`
- 话题名称: `robot/Battery`
- 消息类型: `woosh_robot_msgs/msg/Battery`

### ros cli command:

```

ros2 service call /woosh_robot/robot/Battery woosh_robot_msgs/srv/Battery
ros2 topic echo /woosh_robot/robot/Battery

```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/Battery --all-comments`

```

# 机器人电池信息

# 充电状态
woosh_robot_msgs/BatteryChargeState charge_state
# 未定义的
int32 K_CHARGE_STATE_UNDEFINED=0
# 0: 没在充电
int32 K_NOT=1
# 1: 手动充电中
int32 K_MANUAL=2
# 2: 自动充电中
int32 K_AUTO=3

int32 value
# 电量百分比，0-100数值，100表示全满，0表示没有电量
uint32 power
# 电池健康(充满容量/设计容量)
uint32 health
# 循环次数
uint32 charge_cycle
# 电池寿命
uint32 battery_cycle

```

```
# 电池温度(最高温度)
uint32 temp_max
```

## 获取网络信息

- 接口类型: `service` | `topic`
- 服务名称: `robot/Network`
- 话题名称: `robot/Network`
- 消息类型: `woosh_robot_msgs/msg/Network`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/Network woosh_robot_msgs/srv/Network
ros2 topic echo /woosh_robot/robot/Network
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/Network --all-comments`

```
# 机器人网络信息

# 网络连接状态
bool is_connected
# 机器人IP
string robot_ip
# 调度IP
string sch_ip
# 机器人WiFi信息
woosh_robot_msgs/NetworkWiFi wifi
    # 当前连接WiFi名称
    string name
    # 网络连接状态码
    uint64 code
    # WiFi列表json格式
    uint8[] list_json
    # WiFi信号强度
    uint32 strength
    # WiFi模式
    woosh_robot_msgs/NetworkWiFiMode mode
        # 未定义的
        int32 K_WIFI_MODE_UNDEFINED=0
        # ap模式
        int32 K_AP=1
        # 正在切换到ap模式
        int32 K_TO_AP=2
        # 客户端模式
        int32 K_CLIENT=3
        # 正在切换到客户端模式
        int32 K_TO_CLIENT=4

    int32 value
```

## 获取场景信息

- 接口类型: `service` | `topic`
- 服务名称: `robot/Scene`
- 话题名称: `robot/Scene`
- 消息类型: `woosh_robot_msgs/msg/Scene`

ros cli command:

```
ros2 service call /woosh_robot/robot/Scene woosh_robot_msgs/srv/Scene
ros2 topic echo /woosh_robot/robot/Scene
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/Scene --all-comments`

```
# 机器人场景信息

# 场景名
string scene_name
# 当前地图ID
uint32 map_id
# 地图名
string map_name
# 地图数据版本号
int64 version
```

## 获取任务进度

- 接口类型: `service` | `topic`
- 服务名称: `robot/TaskProc`
- 话题名称: `robot/TaskProc`
- 消息类型: `woosh_robot_msgs/msg/TaskProc`

ros cli command:

```
ros2 service call /woosh_robot/robot/TaskProc woosh_robot_msgs/srv/TaskProc
ros2 topic echo /woosh_robot/robot/TaskProc
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/TaskProc --all-comments`

```
# 机器人任务执行信息

# 机器人任务ID
int64 robot_task_id
# 任务类型
woosh_robot_msgs/Type type
# 未定义的
int32 K_TYPE_UNDEFINED=0
# 拣选
int32 K_PICK=1
# 泊车
int32 K_PARKING=2
```

```

# 充电
int32 K_CHARGE=3

# 搬运
int32 K_CARRY=4

int32 value

# 任务状态
woosh_task_msgs/State state

# 未定义的
int32 K_STATE_UNDEFINED=0

# 初始化
int32 K_INIT=1

# 准备的
int32 K_READY=2

# 执行中
int32 K_EXECUTING=3

# 暂停的
int32 K_PAUSED=4

# 动作等待
int32 K_ACTION_WAIT=5

# 任务等待
int32 K_TASK_WAIT=6

# 完成的
int32 K_COMPLETED=7

# 取消的
int32 K_CANCELED=8

# 失败的
int32 K_FAILED=9

int32 value

# 动作信息
woosh_robot_msgs/TaskProcAction action

# 动作类型
woosh_action_msgs/Type type

# 未定义的
int32 K_TYPE_UNDEFINED=0

# 导航
int32 K_NAV=1

# 单步控制
int32 K_STEP_CTRL=2

# 二次定位进入
int32 K_SECONDPOS_ENTER=3

# 二次定位退出
int32 K_SECONDPOS_QUIT=4

# 搬运动作
int32 K_CARRY=5

# 等待
int32 K_WAIT=6

# 充电
int32 K_CHARGE=7

int32 value

# 动作状态

# 未定义的
int32 K_STATE_UNDEFINED=0

```

```

# 执行中
int32 K_ROS_EXECUTING=1
# 警告
int32 K_ROS_WARNING=2
# 取消
int32 K_ROS_CANCEL=3
# 完成
int32 K_ROS_SUCCESS=4
# 失败
int32 K_ROS_FAILURE=5
# 暂停
int32 K_SUSPEND=10
# 管制
int32 K_TRAFFI_CTRL=11

int32 value
# 动作等待ID
int32 wait_id
# 目的地
string dest
# 消息
string msg
# 最后更新时间(s)
int32 time

```

## 获取最近50条历史任务

- 接口类型: `service`
- 服务名称: `robot/TaskHistory`
- 消息类型: `woosh_robot_msgs/msg/TaskHistory`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/TaskHistory woosh_robot_msgs/srv/TaskHistory
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/TaskHistory --all-comments`

## 获取设备状态

- 接口类型: `service` | `topic`
- 服务名称: `robot/DeviceState`
- 话题名称: `robot/DeviceState`
- 消息类型: `woosh_robot_msgs/msg/DeviceState`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/DeviceState woosh_robot_msgs/srv/DeviceState
ros2 topic echo /woosh_robot/robot/DeviceState
```

参数说明详见:

```
ros2 interface show woosh_robot_msgs/msg/DeviceState --all-comments
ros2 interface show woosh_robot_msgs/msg/DeviceStateHardwareBit --all-comments
ros2 interface show woosh_robot_msgs/msg/DeviceStateSoftwareBit --all-comments
```

# 机器人设备状态

# DeviceState.HardwareBit, 每个bit表示一个状态

uint32 hardware

# DeviceState.SoftwareBit, 每个bit表示一个状态

uint32 software

# 机器人硬件设备位信息

# 未定义

int32 K\_HARDWARE\_BIT\_UNDEFINED=0

# 按钮1(暂停/继续/下一步)

# 屏蔽呼叫

```
int32 K_MUTE_CALL=16
# 程序静音
int32 K_PROGRAM_MUTE=32

int32 value
```

## 获取硬件状态

- 接口类型: `service` | `topic`
- 服务名称: `robot/HardwareState`
- 话题名称: `robot/HardwareState`
- 消息类型: `woosh_robot_msgs/msg/HardwareState`

### ros cli command:

```
ros2 service call /woosh_robot/robot/HardwareState
woosh_robot_msgs/srv/HardwareState
ros2 topic echo /woosh_robot/robot/HardwareState
```

### 参数说明详见:

```
ros2 interface show woosh_robot_msgs/msg/HardwareState --all-comments
ros2 interface show woosh_robot_msgs/msg/HardwareStateState --all-comments
```

## 获取运行状态

- 接口类型: `service` | `topic`
- 服务名称: `robot/OperationState`
- 话题名称: `robot/OperationState`
- 消息类型: `woosh_robot_msgs/msg/OperationState`

### ros cli command:

```
ros2 service call /woosh_robot/robot/OperationState
woosh_robot_msgs/srv/OperationState
ros2 topic echo /woosh_robot/robot/OperationState
```

### 参数说明详见:

```
ros2 interface show woosh_robot_msgs/msg/OperationState --all-comments
ros2 interface show woosh_robot_msgs/msg/OperationStateNavBit --all-comments
ros2 interface show woosh_robot_msgs/msg/OperationStateRobotBit --all-comments
```

# 机器人运行状态

```
# OperationState.NavBit 每个bit表示一个状态
uint32 nav
# OperationState.RobotBit 每个bit表示一个状态
uint32 robot
```

```
# 机器人导航相关位信息

# 未定义
int32 K_NAV_BIT_UNDEFINED=0
# 狭窄通道
int32 K_NARROW=1
# 引导到达
int32 K_GUIDE=2
# 乘梯中
int32 K_INA_LIFT=4
# 阻碍
int32 K_IMPEDE=8
# 二维码
int32 K_QR_CODE=16
# 分段到达
int32 K_STAGE=32

int32 value
```

```
# 机器人位信息

# 未定义
int32 K_ROBOT_BIT_UNDEFINED=0
# 可接任务
int32 K_TASKABLE=1

int32 value
```

## 获取模型信息

- 接口类型: `service` | `topic`
- 服务名称: `robot/Model`
- 话题名称: `robot/Model`
- 消息类型: `woosh_robot_msgs/msg/Model`

### ros cli command:

```
ros2 service call /woosh_robot/robot/Model woosh_robot_msgs/srv/Model
ros2 topic echo /woosh_robot/robot/Model
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/Model --all-comments`

```
# 机器人模型

woosh_common_msgs/Point[] model
  # x
  float32 x
  # y
  float32 y
  # z
  float32 z
# 模型类型
woosh_robot_msgs/FootPrint type
```

```

# 原始
int32 K_ORIGINAL=0
# 膨胀(背负货物)
int32 K_EXPAND=1
# 备用
int32 K_SPARE=2
# 对接
int32 K_DOCK=3

int32 value

```

## 获取异常码

- 接口类型: `service` | `topic`
- 服务名称: `robot/AbnormalCodes`
- 话题名称: `robot/AbnormalCodes`
- 消息类型: `woosh_robot_msgs/msg/AbnormalCodes`

**ros cli command:**

```

ros2 service call /woosh_robot/robot/AbnormalCodes
woosh_robot_msgs/srv/AbnormalCodes
ros2 topic echo /woosh_robot/robot/AbnormalCodes

```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/AbnormalCodes --all-comments`

## 订阅状态码

- 接口类型: `topic`
- 话题名称: `robot/StatusCode`
- 消息类型: `woosh_robot_msgs/msg/StatusCode`

**ros cli command:**

```

ros2 topic echo /woosh_robot/robot/StatusCode

```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/StatusCode --all-comments`

## 获取最近50条状态码

- 接口类型: `service`
- 服务名称: `robot/StatusCodes`
- 消息类型: `woosh_robot_msgs/msg/StatusCodes`

**ros cli command:**

```

ros2 service call /woosh_robot/robot/StatusCodes woosh_robot_msgs/srv/StatusCodes

```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/StatusCodes --all-comments`

## 获取导航路径

- 接口类型: `service` | `topic`
- 服务名称: `robot/NavPath`
- 话题名称: `robot/NavPath`
- 消息类型: `woosh_robot_msgs/msg/NavPath`

ros cli command:

```
ros2 service call /woosh_robot/robot/NavPath woosh_robot_msgs/srv/NavPath
ros2 topic echo /woosh_robot/robot/NavPath
```

参数说明详见 `ros2 interface show woosh_robot_msgs/msg/NavPath --all-comments`

```
# 机器人导航路径

# 导航路径
woosh_nav_msgs/Path path
  # 路径
  woosh_common_msgs/Pose2D[] poses
    # x
    float32 x
    # y
    float32 y
    # 朝向
    float32 theta
```

## 机器人请求相关

### 初始化机器人

- 接口类型: `service`
- 服务名称: `robot/InitRobot`
- 消息类型: `woosh_robot_msgs/srv/InitRobot`

ros cli command:

```
# 原地复位
ros2 service call /woosh_robot/robot/InitRobot woosh_robot_msgs/srv/InitRobot "
{arg:{is_record: true}}"
# 指定坐标复位
ros2 service call /woosh_robot/robot/InitRobot woosh_robot_msgs/srv/InitRobot "
{arg:{pose:{x: 1.23, y: 2.34, theta: 1.57}}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/InitRobot --all-comments`

```
# 初始化机器人

woosh_robot_msgs/InitRobot arg
  # 是否记录点复位
  bool is_record
```

```

# 设置机器人为新的坐标
woosh_common_msgs/Pose2D pose
  # x
  float32 x
  # y
  float32 y
  # 朝向
  float32 theta
---
# 请求成功与否
bool ok
# 请求状态消息
string msg

```

## 机器人位置校准

- 接口类型: `service`
- 服务名称: `robot/SetRobotPose`
- 消息类型: `woosh_robot_msgs/srv/SetRobotPose`

**ros cli command:**

```

ros2 service call /woosh_robot/robot/SetRobotPose
woosh_robot_msgs/srv/SetRobotPose "{arg:{pose:{x: 1.23, y: 2.34, theta: 1.57}}}"

```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetRobotPose --all-comments`

```

# 设置机器人位姿
woosh_robot_msgs/SetRobotPose arg
  woosh_common_msgs/Pose2D pose
    float32 x
    float32 y
    float32 theta
---
# 请求成功与否
bool ok
# 请求状态消息
string msg

```

## 设置机器人占用

- 接口类型: `service`
- 服务名称: `robot/SetOccupancy`
- 消息类型: `woosh_robot_msgs/srv/SetOccupancy`

**ros cli command:**

```

ros2 service call /woosh_robot/robot/SetOccupancy
woosh_robot_msgs/srv/SetOccupancy "{arg:{occupy: true}}"

```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetOccupancy --all-comments`

```
# 设置机器人占用

woosh_robot_msgs/SetOccupancy arg
  bool occupy
---
# 请求成功与否
bool ok
# 请求状态消息
string msg
```

## 设置屏蔽呼叫

- 接口类型: `service`
- 服务名称: `robot/SetMuteCall`
- 消息类型: `woosh_robot_msgs/srv/SetMuteCall`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/SetMuteCall woosh_robot_msgs/srv/SetMuteCall
"{arg:{mute: true}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetMuteCall --all-comments`

```
# 设置屏蔽呼叫

woosh_robot_msgs/SetMuteCall arg
  bool mute
---
# 请求成功与否
bool ok
# 请求状态消息
string msg
```

## 设置程序静音

- 接口类型: `service`
- 服务名称: `robot/SetProgramMute`
- 消息类型: `woosh_robot_msgs/srv/SetProgramMute`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/SetProgramMute
woosh_robot_msgs/srv/SetProgramMute "{arg:{mute: true}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetProgramMute --all-comments`

```
# 设置程序静音

woosh_robot_msgs/SetProgramMute arg
    bool mute
---
# 请求成功与否
bool ok
# 请求状态消息
string msg
```

## 切换控制模式

- 接口类型: `service`
- 服务名称: `robot/SwitchControlMode`
- 消息类型: `woosh_robot_msgs/srv/SwitchControlMode`

**ros cli command:**

```
ros2 service call /woosh_robot/robot/SwitchControlMode
woosh_robot_msgs/srv/SwitchControlMode "{arg:{mode:{value: 1}}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SwitchControlMode --all-comments`

```
# 切换控制模式

woosh_robot_msgs/SwitchControlMode arg
    # 机器人控制模式
    woosh_robot_msgs/ControlMode mode
        # 未定义的
        int32 K_CONTROL_MODE_UNDEFINED=0
        # 自动
        int32 K_AUTO=1
        # 手动
        int32 K_MANUAL=2
        # 维护
        int32 K_MAINTAIN=3

        int32 value
    ---
# 机器人模式
woosh_robot_msgs/Mode ret
    # 控制模式
    woosh_robot_msgs/ControlMode ctrl
        # 未定义的
        int32 K_CONTROL_MODE_UNDEFINED=0
        # 自动
        int32 K_AUTO=1
        # 手动
        int32 K_MANUAL=2
        # 维护
        int32 K_MAINTAIN=3
```

```

    int32 value

## 语音播报

- 接口类型: `service`
- 服务名称: `robot/Speak`
- 消息类型: `woosh_robot_msgs/srv/Speak`

### ros cli command:

```
ros2 service call /woosh_robot/robot/Speak woosh_robot_msgs/srv/Speak "{arg:
{text: 'Hello\ world'}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/Speak --all-comments`

```
# 语音播报请求

woosh_robot_msgs/Speak arg
    # 语音合成的内容，为空则停止播报
    string text
---
# 请求成功与否
bool ok
# 请求状态消息
string msg
```

## 速度控制(遥控)

- 接口类型: `service`
- 服务名称: `robot/Twist`
- 消息类型: `woosh_robot_msgs/srv/Twist`

### ros cli command:

```
ros2 service call /woosh_robot/robot/Twist woosh_robot_msgs/srv/Twist "{arg:
{linear: 0.2, angular: 0.785}}"
```

**说明:** 此接口需要持续请求，停止请求后小车将平滑减速至0速度，需要小车立马停止需要主动发送0速度，即: `{arg:{linear: 0.0, angular: 0.0}}`

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/Twist --all-comments`

```
# 速度控制请求

woosh_robot_msgs/Twist arg
    # 线速度，单位为m/s，正值往前
    float32 linear
    # 角速度，单位为弧度/s，正值逆时针旋转
    float32 angular
    # 线速度y，单位为m/s，正值往前
    float32 linear_y
---
# 请求成功与否
```

```
bool ok
# 请求状态消息
string msg
```

## 跟随请求

- 接口类型: `service`
- 服务名称: `robot/Follow`
- 消息类型: `woosh_robot_msgs/srv/Follow`

ros cli command:

```
ros2 service call /woosh_robot/robot/Follow woosh_robot_msgs/srv/Follow "{arg:
{type: true}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/Follow --all-comments`

```
# 跟随请求

woosh_robot_msgs/Follow arg
  # 1:开启自动跟随，0：关闭自动跟随
  bool type
---
# 请求成功与否
bool ok
# 请求状态消息
string msg
```

## 机器人设置相关

### 设置机器人标识

- 接口类型: `service`
- 服务名称: `setting/SetIdentity`
- 消息类型: `woosh_robot_msgs/srv/SetIdentity`

ros cli command:

```
ros2 service call /woosh_robot/setting/Identity woosh_robot_msgs/srv/SetIdentity
"{arg:{name: "woow"}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetIdentity --all-comments`

```
# 设置标识

woosh_robot_msgs/Identity arg
  # 机器人昵称
  string name
---
# 机器人标识
woosh_robot_msgs/Identity ret
  # 机器人昵称
```

```

    string name
# 请求成功与否
bool ok
# 请求状态消息
string msg

```

## 设置服务器连接

- 接口类型: `service`
- 服务名称: `setting/Server`
- 消息类型: `woosh_robot_msgs/srv/SetServer`

**ros cli command:**

```

ros2 service call /woosh_robot/setting/Server woosh_robot_msgs/srv/SetServer "
{arg:{name: "woow"}}"

```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetServer --all-comments`

```

# 设置连接服务器地址

woosh_robot_msgs/Server arg
# 服务器IP
string ip
# 服务器端口
uint32 port
---
# 连接服务器地址
woosh_robot_msgs/Server ret
# 服务器IP
string ip
# 服务器端口
uint32 port
# 请求成功与否
bool ok
# 请求状态消息
string msg

```

## 开关自主充电

- 接口类型: `service`
- 服务名称: `setting/AutoCharge`
- 消息类型: `woosh_robot_msgs/srv/SetAutoCharge`

**ros cli command:**

```

ros2 service call /woosh_robot/setting/AutoCharge
woosh_robot_msgs/srv/SetAutoCharge "{arg:{allow: true}}"

```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetAutoCharge --all-comments`

```

# 开关自主回充

```

```

woosh_robot_msgs/AutoCharge arg
  # 是否允许
  bool allow
---
# 自主回充
woosh_robot_msgs/AutoCharge ret
  # 是否允许
  bool allow
# 请求成功与否
bool ok
# 请求状态消息
string msg

```

## 开关自主泊车

- 接口类型: `service`
- 服务名称: `setting/AutoPark`
- 消息类型: `woosh_robot_msgs/srv/SetAutoPark`

**ros cli command:**

```

ros2 service call /woosh_robot/setting/AutoPark woosh_robot_msgs/srv/SetAutoPark
"{arg:{allow: true}}"

```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetAutoPark --all-comments`

```

# 开关自主泊车

woosh_robot_msgs/AutoPark arg
  # 是否允许
  bool allow
---
# 自主泊车
woosh_robot_msgs/AutoPark ret
  # 是否允许
  bool allow
# 请求成功与否
bool ok
# 请求状态消息
string msg

```

## 开关货物检测

- 接口类型: `service`
- 服务名称: `setting/GoodsCheck`
- 消息类型: `woosh_robot_msgs/srv/SetGoodsCheck`

**ros cli command:**

```

ros2 service call /woosh_robot/setting/GoodsCheck
woosh_robot_msgs/srv/SetGoodsCheck "{arg:{allow: true}}"

```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetGoodsCheck --all-comments`

```
# 开关货物检测

woosh_robot_msgs/GoodsCheck arg
# 是否允许
bool allow
---
```

```
# 货物检测
woosh_robot_msgs/GoodsCheck ret
# 是否允许
bool allow
# 请求成功与否
bool ok
# 请求状态消息
string msg
```

## 充电电量配置

- 接口类型: `service`
- 服务名称: `setting/Power`
- 消息类型: `woosh_robot_msgs/srv/SetPower`

**ros cli command:**

```
ros2 service call /woosh_robot/setting/Power woosh_robot_msgs/srv/SetPower "{arg:
{alarm: 5, low: 20, idle: 80, full: 100}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetPower --all-comments`

```
# 电量配置

woosh_robot_msgs/Power arg
# 警告电量值
uint32 alarm
# 低电量值
uint32 low
# 空闲电量值
uint32 idle
# 满电量值
uint32 full
---
```

```
# 电量配置
woosh_robot_msgs/Power ret
# 警告电量值
uint32 alarm
# 低电量值
uint32 low
# 空闲电量值
uint32 idle
# 满电量值
uint32 full
# 请求成功与否
```

```
bool ok
# 请求状态消息
string msg
```

## 系统声音设置

- 接口类型: `service`
- 服务名称: `setting/Sound`
- 消息类型: `woosh_robot_msgs/srv/SetSound`

ros cli command:

```
ros2 service call /woosh_robot/setting/Sound woosh_robot_msgs/srv/SetSound "{arg: {mute: false, volume: 50}}"
```

参数说明详见 `ros2 interface show woosh_robot_msgs/srv/SetSound --all-comments`

```
# 声音设置

woosh_robot_msgs/Sound arg
  # 静音
  bool mute
  # 音量
  uint32 volume
  ---
# 声音设置
woosh_robot_msgs/Sound ret
  # 机器人声音设置

## 步进控制

- 接口类型: `action`
- 服务名称: `ros/StepControl`
- 消息类型: `woosh_ros_msgs/action/StepControl`

ros cli command:

```

# 步进直行
ros2 action send_goal /woosh_robot/ros/StepControl
woosh_ros_msgs/action/StepControl "{arg:{action:{value: 1}, steps:[{mode:{value: 1}, speed: 0.5, value: 2}]}}" --feedback
# 步进旋转
ros2 action send_goal /woosh_robot/ros/StepControl
woosh_ros_msgs/action/StepControl "{arg:{action:{value: 1}, steps:[{mode:{value: 2}, speed: 0.78, value: 3.14}]}}" --feedback

```

参数说明详见 `ros2 interface show woosh_ros_msgs/action/StepControl --all-comments`

```
